

MESH LED SCREEN, TRANSPARENT

Window Shop Video

MESH-XM

Transparent Video Screen: To See and To Be Seen

Designed to fit your storefronts and transform them into communication displays, our transparent screens deliver a unique and captivating experience — with no compromise on message clarity thanks to high brightness, and no compromise on the view to the outside either. Already installed for major brands in France, these next-generation screens draw attention and enhance your brand image.

Turn your storefront into a powerful marketing asset.

Mesh LED: Alliez Polyvalence et Élégance

Installation costs are kept low since modules are placed side by side thanks to their adhesive surface, directly onto your storefront glass.

The 25cm-wide stripes assemble up to 3m high and let you build screens as big as necessary, without limit. The flexibility of the mesh allows it to adapt to curved storefronts.

Easy control: Publish your videos, messages or promotions in a few clics from your computer or smartphone. Thanks to the cloud, you can control screens located remotely.

Reference	MESH-XM
